

Model: CCBWDS8	Hardware And Software Specifications
Main Body	The body is made of one-piece sheet metal and black paint, with carrying handles and table mats
LCD display	7-inch high-definition capacitive touch display with a resolution of 1024*600
Working power	300W industrial control server power supply
Support function	HUB of USB 3.0, transfer rate $\geq 400\text{M}/\text{min}$
WiFi function	Built-in WiFi module for WiFi connection
Hard disk	Storage monitoring level 4T (replaceable to 4T-8T) / 60G solid state drive
Motherboard	I5 motherboard kit
Standard memory	4G memory
Equipment weight	7.8kg
Operating temperature	-10°C--55°C
Dimensions	360mm*260mm*120mm
Interface	8 law enforcement instruments can upload and charge at the same time, the maximum current of a single interface is 5V/1.5A
Data synchronization acquisition	8-way law enforcement instrument data acquisition at the same time
Multi-energy interface	2-way multi-function USB interface
Automatic data collection	After the law enforcement recorder, the collector automatically collects all the video, audio, picture and log data in the law enforcement recorder, and the 8-channel 16G law enforcement recorder completes the acquisition in about 50 minutes (with the function of breakpoint retransmission to prevent data loss))
Automatic data upload	Access data management platform, can automatically upload video and audio files to the upper management server, can be set to upload
Disk space reminder	When the storage capacity of the portable collection terminal is insufficient, the acquisition software will automatically indicate
Automatic charging	After the law enforcement instrument is connected to the portable data collection terminal, the collection terminal will automatically charge it.
Insufficient storage space	The remaining space of the collection station can be viewed in real time on the online management status bar. After the data in the storage disk in the data management device is full, it is automatically overwritten (settable) in the order of priority.
Unit, police officer, equipment information management function	The administrator adds, modifies, and deletes the unit, police, and device information. The normal user does not have this permission.
Data management function	Data can be retrieved by police officer number, name, device number, acquisition time, shooting time light, or one or more conditions, which can mark, lock, copy, cut, delete, upload single or multiple data.
Compatibility	The law enforcement recorder conforming to the standards of the "Single Police Law and Video Recording System" of the Ministry of Public Security can be accessed by the management personnel after registration.
